

Attachment No. 2
to the Agreement No. 4-20 about cooperation during agricultural tests

REPORT

about the results of agricultural tests of fertilizing with humic based substances "EKO-SP" during peas cultivation

1. Name of the company, address: CJSC named after Kirov S.M., Rostov region, Peschanokopsky district, Krasnaya Polyana village
2. Field No.: 2.11/1, field area: 85 hectares
3. Previous culture: winter wheat
4. Soil cultivation: no cultivation
5. Seeding time: 07.03.2020 ___; breed, reproduction: Slovan, RS-2 ___
6. Soil and its type: southern black soil
7. Spraying machine: Amazone Pantera 4502
8. Control: background. Implementation of all needed actions.
9. Variant "EKO-SP": implementation of all needed actions + feeding according the plan (Attachment No.1).

Date	Phase	Application	Tank mixture	Substance quantity	Spray material quantity
16.04.2020	3 rd ternate leaf	foliar application	herbicide Korum + PAV DASH	1 l/hectare EKO-SP	300 l/hectare
21.05.2020	budding - initial blossom	foliar application	insect powder Tayra	1 l/hectare EKO-SP	100 l/hectare

10. Results of agricultural tests of fertilizing with humic based substances "EKO-SP":

a. Quantitative indicators. Measurement date: 28.06.2020

Variant	Testing area, hectare	Accounting area, hectare	Weight, kg	Crop productivity, c/ hectare	Increment	
					c/ hectare	% to control
Control	55	59.8	276060	46.2	-	-
"EKO-SP" application	30	25.2	125160	49.7	3.5	7.5

b. Qualitative indicators. Measurement date: 30.06.2020

Variant	Gluten	Protein	FDM	Natural weight
Control	-	18.86	-	-
"EKO-SP" application	-	20.11	-	-

Conclusion: Foliar application of fertilizing with humic based substances "EKO-SP" during peas cultivation increased crop productivity on 7,5% and protein concentration in products.
