

EKO - SP
power of nature

FERTILIZER BASED ON HUMUS SUBSTANCES

**A NEW LEVEL OF PLANT
HORMONE ACTIVATION**

PREMIUM QUALITY

HIGH TECHNOLOGY

COMPLEX STIMULATING EFFECT ON THE PLANT

The Ministry of Agriculture of the Russian Federation in 2020 and 2021 awarded a gold medal and a diploma 1st degree Kursk GSA "For the technological scheme of using agrochemicals based on humus substances "EKO-SP" in the cultivation of spring grain crops" and "Technology of soybean cultivation using agrochemicals based on humus substances "EKO-SP" in the competition "For achieving high performance in the cultivation of crop production and increasing soil fertility"

Increases productivity
by **7%**

Provides low stress for plants

Improves the quality
of agricultural crops
by **1-3%**

Increases the efficiency of SPR

MEMBER OF
THE UNION OF
ORGANIC FARMING

THE EFFICIENCY IS PROVEN!
The evidence on the website -

EKO-SP.RU

Agro-product EKO-SP is a natural regulator and stimulator of plant growth, obtained from low-lying centuries-old, environmentally friendly peat.

Agro-product EKO-SP is a balanced product containing the entire complex of natural and biologically active substances: humic acid and fulvic acid salts, amino acids, beneficial microflora, macro and micro elements in chelated form.

 This product of agrochemistry improves metabolism and mineral nutrition of plants, accelerates their growth and protect from phytopathogenic microflora.

 Resistance to drought and frost considerably increases.

EKO-SP actively cooperates with specialized scientific institutions such as Lomonosov Moscow State University, Don State Agrarian University, and Southern Federal University in improving and evaluating its products, Perm State Agrarian and Technological University named after academician D. N. Pryanishnikov, I. V. Michurin research Institute of Horticulture, Kursk research CENTER, Rice research CENTER, as well as branches of the Federal State Budgetary Institution Rosselkhoznaizor

IMPACT

SEEDS

Increases the germination energy
Increases quantity of sprouts
Improves the survival

PLANTS

Improves absorption of nutrients
Improves photosynthesis and metabolism
Strengthens the immune system of plants

ECONOMY

Increases productivity by **7%** or more
Improves quality by **2%** or more

Stimulates producing phytoalexines
Commercial value of the crop increases

THE USE OF EKO-SP PROVIDES SEVERAL USE CASES

- 1 Application to the soil before soil treatment or with irrigation water
- 2 Seed Treatment before sowing and soaking the planting material
- 3 Processing of crops for vegetative plants at the beginning of plant development
- 4 Processing of crops for vegetative plants during the formation of the crop
- 5 Processing of crops for vegetative plants during the ripening period

With each use case, certain agricultural indicators and characteristics are improved. The greatest effect is given by a complex application.

10 REASONS TO BUY AND USE EKO-SP

- | | |
|--|--|
|  We use specially prepared structured water |  Big concentration of special useful substances |
|  100% solubility |  Scientific support |
|  You can use it with mineral fertilizers and plant protection products |  Easy to use |
|  Safe for plants and humans |  Economically profitable |
|  We guarantee the high quality of our agroproduct |  Active in micro-doses |

**Fertilizer based on humic substances -
modern solution to the issue of increasing yields!**

Address: 121467, Moscow, Molodogvardeyskaya str., 4, bldg. 1, office 7. **Production:** Russia, Moscow region, village Nakhabino.
